2W, Fixed input voltage, isolated & unregulated single output

Continuous Short Circuit Protection

Patent Protection RoHS

FEATURES

- Operating temperature range: -40℃ to +85℃
- Ultra compact SIP package
- Isolation voltage: 1.5K VDC
- High power density
- No external component required
- International standard pin-out

B_M-2WR2 series are specially designed for applications where an isolated voltage is required in a distributed power supply system. They are suitable for

1. Where the voltage of the input power supply is stable (voltage variation: ±10%Vin);

2. Where isolation between input and output is necessary (isolation voltage ⩽1500VDC);

3. Where the output voltage regulation and the ripple & noise of the output voltage is not strictly required;

4. Typical application: digit circuit condition; normal low-frequency artificial circuit condition; relay drive circuit condition, etc.

Design Reference

1. Typical application circuit

If it is required to further reduce input and output ripple, a filter capacitor may be connected to the input and output terminals, see Fig.3. Moreover, choosing a suitable filter capacitor is very important, start-up problems may be caused if the capacitance is too large. Under the condition of safe and reliable operation, the recommended capacitive load values are shown in Table 1.

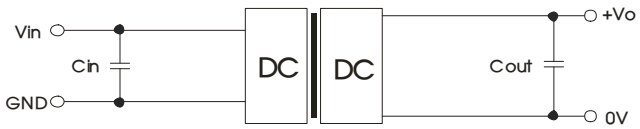

Fig.3

Recommended capacitive load value table (Table 1)

Vin(VDC)	Cin(μF)	Vo (VDC)	Cout(μF)
5	4.7	3.3/5/9/12	10
12	2.2	15/24	1
24	1	--	--

2. EMC solution-recommended circuit

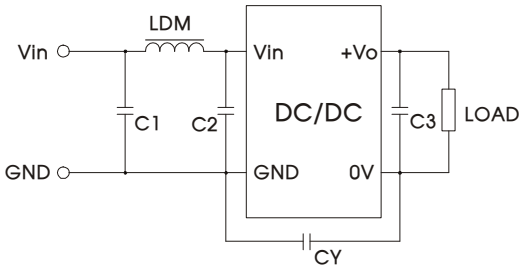

Fig. 4

Input voltage (VDC)		5/12	24
EMI	C1/C2	4.7μF /50V	
	CY	--	1nF/2KV
	C3	Refer to the Cout in Fig.3	
	LDM	6.8μH	

Note: 1. 24V input series is subject to CY (CY : 1nF/2KV).
2. It is not needed to add the component in the peripheral circuit when parameter with the symbol of "--".

3. Output load requirements

In order to ensure the converter can work reliably with high efficiency, the minimum load should not less than 10% rated load when it is used. If the needed power is indeed small, please parallel a resistor on the output side (The sum of the efficient power and resistor consumption power is not less than 10%).
